

Axway Private Cloud Services

Save time and money by leveraging Axway's expertise and infrastructure

Axway's private cloud services deliver fast and economical access to enterprise-class Axway solutions. These secure and reliable implementations are ideal for organizations seeking to reduce their infrastructure footprint and costs while expanding their online trading communities and gaining the agility they need to rapidly respond to changing technologies, opportunities and market conditions.

Allowing Axway to take care of the infrastructure, installation and maintenance enables you to:

- **Reduce costs** with fewer full-time staff, a smaller dedicated infrastructure, and less specialized training. By moving to a hosted solution, you avoid capital expenditures and up-front hardware and software costs – simply “pay as you go” with flexible commitment periods.
- **Speed implementation.** The software is already up and running, so you can put it to work across your enterprise immediately, and decrease ramp-up time for partners.
- **Improve reliability and performance.** Solutions hosted in Axway's secure data center have a consistent uptime of 99%, with built-in redundancy and power backups, 24x5 Help Desk Level 1 through Level 3 support (with the option for 24x7 support), and real-time system monitoring.
- **Take advantage** of flexible processing, storage and deployment capabilities. Scale your Axway solution with as little as 24-hour notification. As your business needs change, easily migrate the software in-house for closer integration with enterprise applications and maximum control of your environment to accommodate traffic volume, complexity and security requirements.
- **Easily expand your trading community.** Axway provides network-based access for managing your B2B applications, so you can seamlessly add new partners as your business grows.

How does it work?

- License, lease or subscribe to the Axway solutions you need.
- The infrastructure (servers, database, SAN, load balancer, multiple firewalls, backup and retention systems, and built in redundancy for network and power) is housed and monitored in the Axway Tier 3 Partner Data Center.
- Axway experts monitor and keep your solutions up and running with industry leading SLAs.
- Monthly reports detailing active operation times, maintenance windows, and error and cause analysis.
- Centralized updates mean you always have access to the very latest features, patches and upgrades.

Axway Private Cloud Services

The following Axway products and solutions are currently available as private cloud services:

- Axway Archiving
