

Stream your enterprise files anywhere, anytime

Work better with next-generation files shares for a modern workplace

 SOLUTION BRIEF

With no hassles, no limits as you can replace your file shares and give your users seamless access from any device, anywhere to their network files. Users can access all their files on demand directly on their desktop or mobile device, even while offline, accelerating productivity and collaboration without logging into FTP sites or portals.

Yet, many organizations still require employees to manage and access files using a VPN for corporate file shares and home directories, which just ends up limiting worker productivity, mobility and collaboration.

Imagine having to sift through file shares on the local network with no mobility and no easy way of collaborating. Lost productivity is unavoidable. And how can you compete in a modern digital world using outdated tools? You can't. But there is a way to simplify how users work while helping them get more done. Syncplicity.

Stream your content. Any device. Any location.

AMPLIFY™ Syncplicity provides users with a way to access their files on any device, from anywhere and with no VPN connection. By streaming content, they can simply share a folder. No logging into a VPN,

pulling down a file and emailing it. Syncplicity makes it easy to collaborate on documents without having to use email.

Sounds simple, and it is. But the benefits really add up. Because you're not just improving user productivity and performance. You're transforming the way people work. Transform a tedious process into something simple, maybe enjoyable, and improve your teams productivity. Users have the added value of working off-line and when their connection changes will sync automatically.

3 ways Syncplicity transforms the workplace

No more VPN

With Syncplicity, users don't need a VPN. They access their files from their desktop or any mobile device.

No hassle

Your home directory and files shares are universal and always with you. Accessing your files easily from any device to share or collaborate becomes an experience that improves the work day, not hinders it.

Find the latest file fast

There is no better feeling than knowing you can find the latest file in a shared folder. No more searching

through your inbox, opening, closing and panicking to identify the latest version.

Don't sweat the storage

So how does all that data fit on a device or laptop? It doesn't have to. Access all your files from your desktop. How does all that data fit on a device or laptop? It doesn't need too. Our innovative technology lets users stream the file they want while all the other files remain in the cloud, but with complete visibility across all folders and files. Files are removed from the cache automatically so that users never have to worry about storage.

The benefits don't stop there. Users can access their files on the go and collaborate using their standard productivity and collaboration tools. Improved productivity — access and ease of use — from desktop, mobile or Web.

- A single, simple way to access enterprise files
- Secure mobile access from anywhere, on any device
- Real-time collaboration on documents
- Internal and external folder and file sharing
- Work offline

Syncplicity looks and feels a lot like a network shared drive, but it's so much more. Plus, you can be confident that your users are working in compliance with your enterprise security and governance policies – keeping your employees, files and organization safe.

AMPLIFY Syncplicity DataHub. File migration made easy.

Say goodbye to manual migration. We help customers move whatever they need from their files shares and home directories into Syncplicity cloud, on-premises or a private cloud. No need for users to manually move their files. With Syncplicity DataHub, all your files can be moved into Syncplicity.

A mobile experience on your desktop.

All your files and folders in Syncplicity – desktop, network file shares and group shares.

Syncplicity DataHub lets you migrate just a few files or large volumes of data. It's easy to configure and maintains the integrity of folder structures, metadata and permissions. Data migration doesn't get more simple and straightforward. Use DataHub to:

- Seamlessly migrate files
- Remove complexity
- Automate mundane tasks

Here today. Built for tomorrow.

AMPLIFY Syncplicity is a modern solution for creating a modern workplace that lets you access enterprise files, remove mundane tasks and improve business agility. The benefits really add up:

Modern infrastructure

- Consolidate datacenters
- Replace legacy storage
- Reduce costs
