

“The Drive” for workplace transformation

SyncDrive offers a single, simple way to access your enterprise files, anywhere, on any device

SOLUTION BRIEF

Simplify work life

Axway Syncplicity SyncDrive takes your old files, such as home directories and group shares, plus new files in the cloud and makes them all available without taking up storage on any device – desktop, laptop or mobile. It’s the drive for workplace transformation.

- No VPN connection required
- File size does not matter
- Access to unstructured data whether in the cloud, on premises or private cloud

Value across the digital ecosystem

Enterprise users

You don’t have to worry about having enough space on your device or maneuvering and moving files so you have the right ones when you need them. SyncDrive changes how IT resources are applied, redefining how users work with large volumes of data across the enterprise. Selectively sync files and the intelligent cache feature takes the anxiety out of running out of storage.

IT departments

SyncDrive doesn’t just have an immediate impact on the user. It will transform your IT department. IT teams can give users secure access to large files and folders across the enterprise regardless of data volume, VPN availability or bandwidth restrictions. Group-based policies allow IT to manage security controls and StorageVault assignments to users based on their group membership.

The value of SyncDrive goes beyond end users and IT teams. The entire enterprise wins. For a typical Fortune 1000 company, a 10 percent increase in data accessibility will result in more than \$65 million additional net income. Syncplicity accelerates digital transformation by unlocking 90 percent of your organization’s unstructured data. With SyncDrive, you’ll be able to make data accessible and usable across the network, and ensure data governance and compliance.

“More data has been created in the past two years than in the entire history of the human race.”

Forbes: Big Data¹

The amount of unstructured data stored in home directories, group shares and network drives across the enterprise is staggering. Data is growing exponentially as the world becomes more digital and realistically, we are just at the beginning of the data explosion. In fact, about 1.7 megabytes of new information will be created every second for every human on the planet by the year 2020. While enterprises struggle to figure out how to store – and access – all of their corporate information, Axway has a solution – Syncplicity SyncDrive

No VPN required

In the digital workplace, users are working at an increasingly faster pace, from numerous locations and on various devices – tablets, laptops and smartphones – interchangeably. Now you can give them seamless, VPN-free access to all the data that's critical to business success.

Secure file and folder sharing across the digital ecosystem

Axway Syncplicity has a granular group-based policy engine that makes it possible for organizations to put controls on how data is shared within its digital enterprise ecosystem. Administrators can give select groups of users affiliate sharing privileges or remove them based on a user's role and department.

File share replacement without the hassles

No limits and no extra steps, either. With SyncDrive, you provide users with mobile, VPN-less access to all their group shares. They can share documents, videos, designs and other large files without logging into FTP sites or portals. Add Axway Syncplicity DataHub to give IT a seamless, secure solution for migrating data for small to large-scale projects.

Worry-free mobile access

In today's modern borderless workforce, employees need secure access to the most current files from anywhere, and on any device. Axway Syncplicity solves this "user cloud threat" as well as a growing problem in the "bring your own device" world – keeping corporate files accessible anywhere, while protecting them from exposure everywhere.

Collaboration and Office 365

Since modern collaboration does not exist without Office 365, Syncplicity's Microsoft Office integrations enable cross-enterprise communication and collaboration that maximizes your Microsoft investments.

Data governance and compliance

With the introduction of SyncDrive, Syncplicity continues to drive workplace transformation by returning the security and control of corporate files back to the enterprise – all while providing employees with full, seamless access to information. Our comprehensive security model strikes the ideal balance for risk reduction and information governance. It centers on giving IT teams maximum flexibility, visibility and control as they meet the user's needs for a digital workplace. Our Hybrid Cloud storage model and PrivacyRegions provide flexibility in complying with data residency requirements.

With SyncDrive, users can:

- Map large folders to SyncDrive (S): rather than Syncplicity folders
- View all "cloud" files without syncing folders or files down
- Easily differentiate between cloud files and local files
- Edit offline since recently opened files are cached
- Preserve disk space with intelligent cache
- Favorite a select subset of folders and files to keep them synced
