

WHAT TO PACK

8 Things You Need for Your Digital Healthcare Journey

Ready to sail into the future of digital healthcare and improve clinical, operational and financial outcomes? You'll need to be prepared with the knowledge and tools necessary to reach your destination. Gear up with Axway's bimodal approach to digital enablement. It provides everything

you need to create an agile integration foundation that improves engagement within your ecosystem and opens the door to new and innovative service opportunities. Do you have what it takes to complete your digital transformation? If not, it's time to get packing.

AN AGILE INTEGRATION FOUNDATION

To succeed in your digital healthcare journey, you need an integration infrastructure that provides consistent interoperability across systems, devices and applications. One that breaks data silos to help you unlock value from health data. And maximizes data security by monitoring PHI exchanges with granular visibility and audit trails to facilitate HIPAA compliance.

ONE

Managed File Transfer

Simplifies secure enterprise data transfer, and enables shared services to reduce costs and optimize resource utilization.

TWO

B2B Integration

Merges the flow of API and EDI data into a single solution and allows seamless B2B exchanges through self-service portals and mobile apps.

THREE

API Integration

Controls and secures the API-based integration layer, enables quick cloud adoption without creating new silos, and ensures data security while exposing APIs.

FOUR

XML & SOA

Extends the reach of your SOA services to cloud, mobile and web by helping you better manage, secure and monitor their access and use.

GREATER ECOSYSTEM ENGAGEMENT

Taking your digital capability to the next level requires tools that allow you to better engage with rapidly expanding healthcare ecosystems. Like APIs that let you create captivating digital experiences and innovative services. Mobile apps that encourage more patient engagement. And real-time analytics that let you gauge and improve performance.

FIVE

API Management

Allows developers to easily build and run new APIs, while giving integration teams control over management, security and governance.

SIX

Identity Federation

Permits access to cloud, mobile and web apps without having to log in multiple times, even if different services require different identities.

SEVEN

Mobile App Development

Design and build rich, native apps that impress across a range of device/OS combinations and release them at an accelerated pace.

EIGHT

Analytics

Drive improvement of digital experiences by providing actionable insights into leading indicators of app and API behaviors.
