

A modern, mobile collaboration solution for field service operations

Everything you need at your fingertips, instantly

Need to resolve issues or make a split-second decision in the field? With Syncplicity, a powerful file sync-and-share and collaboration solution, you get instant access to all your current manuals, step-by-step instructions, schematics, and more. Process work orders, provide status updates, and file reports anytime, anywhere. You can even access large files such as 3D models and as-built drawings with no FTP or email needed.

Whether you're replacing obsolete paper-driven processes or expensive "brick" handheld units, Syncplicity empowers your team with a whole new level of field productivity and collaboration. No more waiting around for updated manuals, which is time consuming and inherently risky. With Syncplicity, your field service teams have the latest versions at their fingertips.

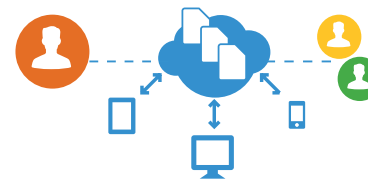

"Many of our users are not technologically savvy. We needed something that was easy to use and repeatable, where we could set them up and the files just transfer themselves. The great thing about Syncplicity is you can bring it in and justify it for a single use case, and then find use case, after use case, after use case as you go."

– Dan Gainey, Manager of IT Operations at Major League Baseball (MLB)
